Telling versus Counting? A Media-Archaeological Point of View

WOLFGANG ERNST

Between the cultural practices of *telling* and *counting* one finds both an affinity and a disjunction; narration and the numerical code can be seen as functions of alternating conditions of the media. The numerical order, the basis of digital technologies, has always already been performed as a cultural practice before becoming technically materialized. Rather than attempting a linear chronological trajectory, the changing historical relation between telling and counting can be described as reconfigurations affected by different media or even media theories.

It was a decisive act of cultural engineering in the occident when an unknown adaptor of the Phoenician syllabic alphabet, somewhere in Greece around 800 B.C., invented additional, elementary symbols to register spoken vowels in order to store and transmit Homer's epics.¹ This brings us close to a media theory of *ac/counting*: oral traditions privilege the narrative mode; on the level of letters, though, every linguistic unit becomes countable. The form of the Homeric hexameter already provided a mnemotechnical tool, a skeleton that performance could fill with narrative flesh.²

Today, in the online-edition of the Microsoft encyclopedia *Encarta*, we can even hear a spoken rendition for the very literal entry *tell*, a re-entry of orality that is filtered by digital procedures.³ *To tell*, we learn, as a transitive verb does

not mean only “a live account in speech or writing of events or facts” (that is, to *tell a story*), but also “to count things” (to *tell a rosary*, for example). The very nature of digital operations and telling thus coincide.

ANNALS

32

The old English *tellan* derives from a prehistoric Germanic word meaning “to put in order” (both in narration and counting). We find this kind of non-explanatory and paratactic mode in the epic discourse.⁴ Homer, in his *Iliad*, already used the form of listing in the appropriately called “Catalogue of Ships” — literally counting the ships and their leaders by names (see especially verse B 493). This set-piece description is paradigmatic of a narrative pause, “a passage at the level of narration to which nothing corresponds at the level of story. The plot does not advance, but something is described.”⁵ How can such a form of listed knowledge be culturally transmitted over centuries? The bard may actually have inherited the form of memory kept by military lists of troops in the Mycenaean age, written in *linear B*, that is, a muster-list which he turned into verse?⁶ Here, telling is counting⁷ — a practice well known from ancient Oriental lists of rulers.

Narration assimilates information by re-counting it in the synecdochical mode.⁸ To *narrate*, we learn from *Webster’s Revised Unabridged Dictionary* (1913), is etymologically related to *knowing*. Knowledge in fact is coupled to the very act of telling, *i.e.* providing a narrative sequence when apparently insignificant facts are being interwoven into a complex reality that cannot be observed directly. Between counting and *telling*, such sequences are well known from non-literary accounts of history. Gregory of Tours, in the early medieval age, wrote

8. See Hayden White, *Metahistory: Historical Imagination in Nineteenth-Century Europe*, Baltimore, Johns Hopkins University Press, 1973.

a history of mankind year by year (*cunctam annorum congeriem connotare*), with the connotation of *connotare* being both “telling” and mathematical counting in discrete leaps. Today, historiography rigorously separates narrated time from calculated time, but early Medieval Europe reads them together.⁹ For example, in Regensburg, a supplement to the *Annales Fuldenses* comments on the year 884: *instanti anno, quo ista computamus*.¹⁰ The conjunction between telling stories and counting time is more than just a word game: verbs like *conter*, *contar*, *raccontare*, *erzählen*, *to tell* are testimonies of a way of perceiving realities that oscillate between narrative and statistics.

erzählen, ahd. *irzellen* (8. Jh.), mhd. *erzel(le)n* steht zunächst (ähnlich wie ahd. *zellen*, mhd. *zeln*, s. *zählen*) für zählen, (der Reihe nach) aufzählen, auch bei der Darstellung von Ereignissen und Taten, daher (im Rechtswesen) „öffentlich hersagen und verkünden“ und allgemein „mündlich mitteilen, berichten“. Die letztere Bedeutung ist dann allein auf *erzählen* übergegangen, während nhd. *zählen* auf den rechnerischen Bereich eingeschränkt wird; doch hält sich die alte Bedeutung „aufzählen“ gelegentlich bis ins 18. Jh.¹¹

In later medieval times, telling-as-counting was not restricted to linguistic practices. The hourly ringing of bells in monasteries—an acoustic media of structuring time—as well reminded of a technologically enhanced rule-governed, almost algorithmic symbolic order. The meaning of Latin *computus* thus encompassed a mechanical order as well as a symbolical one, and the quantification of time was transformed from an ancient counting to an allegorical interpretation.

To *tell* as a transitive verb means “to count things”. When all sensual dimensions are quantifiable, even the temporal resolution, telling gets liberated

9. Arno Borst, *Computus. Zeit und Zahl in der Geschichte Europas*, Berlin, Verlag Klaus Wagenbach, 1990, p. 29-116; footnote p. 77.

10. “In this very year when we are telling this story...”, quoted in Arno Borst, *Computus. Zeit und Zahl in der Geschichte Europas*, p. 41, referring to *Annales Fuldenses* (anonymous medieval author), anno 884, in *Monumenta Germaniae Historica*, series *Scriptores rerum Germanicarum*, vol. 7, Hannover, 1891, p. 112.

11. “In medieval German, ‘erzählen’ (telling) originally meant counting in a sequential order. For example, in the representation of events, which in legal matters got the meaning of ‘public declaration’ as well. This meaning shifted to what we mean by telling today, while ‘zählen’ got restricted to counting, even if both uses could overlap until the 18th century.” *Etymologisches Wörterbuch des Deutschen*, Wolfgang Pfeifer (ed.), Berlin (Akademie), 1993, p. 298. My translation.

from the narrative grip—a media-archaeological amnesia of cultural techniques like that of the early Medieval *annales*, a sequential notation of temporal events with no metahistorical, narrative prefiguration. We get a glimpse of a way of processing cultural experience that does not need stories (not yet? not any more?). Modern historians, though, are obliged not just to order data like antiquaries, but also to propose models of relations between them, to interpret plausible connections between events. Here, the difference between *tableau* as statistical form (annalism) and as painting (historiography) becomes evident. According to George Kubler it is the historian's task to recognize *the shape of time* and to describe it appropriately on different kinds of *tableaux*.¹² The *Annales Sangallenses*, figuring as an early medieval form of record of events in the 1826 scholarly edition of the *Monumenta Germaniae Historica* (series *Scriptores*), render events (like the medieval *recordatio*) as a list of entries, but also of non-entries, empty storage spaces that provide gaps for reading, silence as statement. Chronometrics *count* with non-events as well — the serial character of human existence (fig. 1).

34

As we learn from Lessing's 1766 treatise *Laocoön*, only such gaps make readers or betrayers participate actively, since they project their own visions (letters, images) into the voids — the condition for aesthetic experience.¹³ It was with the invention of printing that Gutenberg could, in a media-archaeological context, literally calculate with empty spaces: in printing (as with typewriters and computer keyboards), even the empty key *counts*. In digital o/1 computing, even absence counts as value — *nulla rosa est* (as expressed in medieval scholastics). “Chante (imagine), ma Muse, le Rien: ne méprise pas la tâche / Car Rien est une gemme, Rien est de l'or précieux.”¹⁴ Does something like “human nature” really ask to avoid semantic *vacui*?¹⁵ Even annalism with all its discrete

gaps implicitly imposes a narrative form on the events by means that are poetic in nature:¹⁶

The Middle Ages stood by the archaeologist. His ability to look at mere fragments in a glass case and yet see the whole vessel as it should appear and to forget completely its fragmentary state, this ability was native to the medieval mind. [...] The medieval mind set the Whole before the parts and found it easier than we do

16. Hayden White, *The Content of the Form: Narrative Discourse and Historical Representation*, Baltimore, London, Johns Hopkins University Press, 1987, p. 42.

Genette,²⁷ instead of its narration, resembles a diagram rather than a picture and requires anonymous pattern recognition instead of the personal narrator. Between the discrete entries, though, there is always space left for biographical micro-narrative information.

Chronology may supply order in the temporal arrangement of events, but it does not supply explicit patterning, and that is what separates proper history from chronicles and annals. The explicit plotting of time describes, organizes, and explains events, persons, and actions in the past all at one and the same time. Chronicles offer their readers “one thing after the other”; proper histories provide their readers with “one thing because of the other”.²⁸

LESSING'S LAOCOÖN

38

When Lessing published his essay *Laokoon oder die Grenzen der Malerey und der Poesie*, he revolutionized meditations on the semiotics of the arts by providing them with a media theory (as opposed, for example, to Immanuel Kant's rather abstract notion of a spatio-temporal *a priori*). Lessing discusses the different aesthetic qualities of one and the same subject (the death of Trojan priest Laocoön and his sons) in sculptural *versus* epic representation (Homer's *Iliad*, Virgil's *Aeneid*). Thus Lessing has become a theoretician of “intermediality” *avant la lettre*, by insisting that—based on their respective media qualities—painting cannot simply be translated into poetry and *vice versa*. According to Lessing, “succession of time is the province of the poet just as space is that of the painter.”²⁹ His argument of space-based *versus* time-based arts seems more actual than ever (at least as a media-analytic question). Whereas in art historical iconology literature and the visual arts seem to be interchangeable in *ekphrasis*, the archaeological gaze registers their discontinuity; classical archaeologists refuse to compare the Homeric epic with the figures on the Dipylon vase. Homer's description of Achilles's shield seems to fulfil Lessing's aesthetic claim, since instead of a verbal picture he gives us the genetic story of how the weapon is

being made by the god Hephaistos. In this literary description of a work of art, we find traces of both linearization and non-linearization. We find a similar situation in book I of Virgil's *Aeneid*: when the protagonist is thrown on the shore of Carthage, he is surprised to see scenes of warfare he is familiar with in the painted panels that decorate the temple of Juno. In fact, he sees his own past as part of the Trojan War. In the logic of Virgil's epic this leads to an *ekphrasis* with Aeneas telling the stories of what he sees:

In this [...] Virgil has confused the pictorial and the narrative, and in so doing he has subordinated the art of Dido's Punic painters to the art of the *Aeneid*. In Virgil's *ekphrasis*, we begin with spatial markers [...]. These are qualified and finally replaced by the strictly temporal habits of the narrative [...]; significantly, Aeneas is pulled into the temporal, not painterly, narrative by this sympathetic response [...]. [...] The Virgilian narrative gains ascendancy over the pictorial.³⁰

Description is at odds with narrative, as accentuated in the appropriate entry in the *Encyclopédie ou Dictionnaire raisonné des sciences, des arts et des métiers* (1751-1780). In natural history it means a discrete mode of representation ("Plus un corps est composé, plus il est nécessaire de décrire les détails de son organisation, pour en exposer le jeu & la mécanique"; in geometry it means "l'action de tracer une ligne, une surface, etc."); finally in literature:

Une *description* est l'énumération des attributs d'une chose, dont plusieurs sont accidentelles [...]. Une *description* au premier coup d'œil a l'air d'une définition; elle est même convertible avec la chose décrite, mais elle ne la fait pas connaître à fond, parce qu'elle n'en renferme pas ou n'en expose pas les attributs essentiels.³¹

That is, description remains exterior to the essence of things — by virtue of the archaeological (instead of the historicizing) gaze.

SPACE, MOVEMENT, CINEMATOGRAPHICS

Is film the media-dialectical conjunction of the two semiotic regimes Lessing tried to separate categorically? Cinematography has created a new perception of central temporal categories like simultaneity and the spatialization of time;

30. Diskin Clay, "The Archaeology of the Temple to Juno in Carthage (*Aen.* 1.446-93)", *Classical Philology*, No. 83, January 1988, p. 200.

31. *Encyclopédie ou Dictionnaire raisonné des sciences, des arts et des métiers*, vol. 4, Paris, 1754, p. 878.

“thus film has merged Lessing’s separation of spatially and temporally performative arts.”³² In his theory of cinematographic montage, Sergei Eisenstein refers to El Greco’s painterly representation of *Laocoön* in order to describe his idea of the “ecstatic” moments in film.³³ And any attempt to put the *Laocoön* sculpture into film would have to refer to Virgil’s narrative in order to get to a dramatic climax of the figurative constellation and picturesque pose of the Trojan priest and his sons at the moment of deadly out-cry (as action).³⁴ Lessing’s differential media theory of spatiality (painting, sculpture) *versus* temporality (verbal narrative) has indeed been translated into film theory by Rudolf Arnheim. His essay “New Laocoön” tries to defend the art of silent movies against the new age of film + sound, that is, from the moment when text, in the form of voices and voice-over, enters not only the space between the images but the images themselves. Only with silent movies did Arnheim see the chance for the appropriate representation of “pregnant moments” (as Lessing called them) that require implicit rather than verbally explicit expression.³⁵ How close is film to theatre (Lessing’s *telos*)? Jean-Luc Godard’s movie *Passion* (1982) freezes the temporal succession of moving images into painterly stillness of pregnancy (gestures of passion, in Aby Warburg’s sense) by letting his actors perform *tableaux vivants* of famous pictures like Rembrandt’s *Die Nachtwache* (1642). A “still” composed from moving images is uncanny, however, resulting in a cognitive dissonance. Dynamic *stasis* is a paradox, a non-narrative.

Zur räumlichen Konstruktion filmischen Erzählens”, in Hans Beller u.a. (ed.), *Onscreen / Offscreen. Grenzen, Übergänge und Wandel des filmischen Raumes*, Stuttgart, Verlag Hatje Cantz, 2000, p. 93-121.

35. Rudolf Arnheim, “A New Laocoön. Artistic Composites and the Talking Film”, *Film as Art*, Berkeley, Los Angeles, London, University of California Press, 1957, p. 199-230.

Media-archaeology of cinematography frequently refers back to the kind of chronicle of events depicted on the so-called Tapestry of Bayeux, where the continuous story of the Norman invasion of England is rhythmically interrupted by the painterly interpolation of trees and towers that both link and separate the single “frames.” This is a pre-cinematic form of cutting that has often been compared to film or comic strips, with abrupt changes of place, jumps in time and flash-backs (while the tapestry, in fact, guides the eye successively through time and space).³⁶ Film, in the sense of Lessing’s *Hamburger Dramaturgie* and Hugo Münsterberg’s *Photo-Play*, remembered for its close connections with theatre, cannot show the simultaneous coexistence of action in space; a dialogue, for example, is represented by a sequence of shot and counter-shot, thus cutting homogeneous space into segments. At this point, a virtual space is created on a cognitive level in the viewer’s mind. Physically, though, film puts sequences one after another on the celluloid reel—just like on the Bayeux tapestry.

Similarly, the tri-partite video-projection *You never know the whole story* by Ute Friedrike Jürß in the Museum for Contemporary Art (ZKM Karlsruhe, 2000) presented electronic images in narrative recess; the apparent *lack* of motion resulted from the different media pattern: “In spite of Lessing’s *Laocoön* claim, the press-photography—different from sculpture and painting—by its very nature as a momentary snap-shot, is already, by its very mode of production, an image of time brought to a stand-still.”³⁷ The theatrical or filmic *tableau vivant* differs from a classical painting exactly by being *time-based*. Thomas Levin calls this media crossover, this paradoxical translation of Lessing’s paradigm into the age of electronic media, “hybrid intermediality.”³⁸ Does installation art return us to the spatial dimension of the image?

36. Ulrich Kuder, *Der Teppich von Bayeux oder: Wer hatte die Fäden in der Hand?*, Frankfurt am Main, Fischer, 1994, p. 7-26 (23); see also Anatole Jakovsky, “Encore quelques mots en marge de la Tapisserie de Bayeux”, *L’Âge Nouveau*, vol. 21, 1947, p. 24-27, which compares the tapestry with early Russian films.

37. Thomas Y. Levin, “*You Never Know the Whole Story*. Ute Friederike Jürß und die Ästhetik des heterochronen Bildes”, in Ute Friederike Jürß, “*You Never Know the Whole Story*” (exhibition catalogue), Götz Adriani (ed.), Ostfildern-Ruit, Verlag Hatje Cantz, 2000, p. 57.

38. Thomas Y. Levin, “*You Never Know the Whole Story*”, p. 61.

What better place than the museum to confront the cinema once more with itself and its history? A curious set of parallels has evolved between the museum as a space of contemplation, and the electronic vision machines [...]; the museum as a site of aesthetic distance and reflection, and scientific instruments of calculation, of mathematics as means of measuring and monitoring.³⁹

The very technical *apriori* (more or less 24 frames per second) of any film or video projection of a *tableau vivant* undercuts the apparent visual simultaneity. The indexical basis of technical images is no longer space but time (and its time-axis manipulation)—which links it with narrative in a way that Lessing wanted to exclude. But there are forms of re-entry for space, a kind of second order return to Lessing's theorem. Montage, as the internal operation of moving images in Mike Figgis' movie *Timecode* (2000), takes place not only in time but in space as well, on the squared screen, thus surpassing Robert Altman's *Short Cuts* (1993). In a dialogue at the end of the film this form becomes ironically self-reflexive in a kind of parody of early Soviet theories of cinematographic montage: "Beyond montage. Digital video has arrived at last."

42

THE SPATIALIZATION OF TELLING: DIGITAL AESTHETICS (INTERNET AND COMPUTER GAMES)

Against cinematographic sequencing, digital interface aesthetics privileges spatialization again, with its *Windows* perspective and hypertextual logic. Pixel-based media lead to the re-entry of narrative as calculation, and in the acoustic realm (techno-music) allows for sampling and intervals by *time-stretching* and *time-compression*.⁴⁰ Narrative on the emphatic literary level (*raconter*) is being replaced by literally *counting* micro-events on the media-archaeological level.

Among the attempts to spatialize digital communication, the Virtual Reality Modeling Language was conceived for virtual worlds hyperlinked with the World Wide Web. And computer games, though apparently performing stories or at least plots on the surface level, are not based on linear narratives any more, but strictly on algorithms and processual trees. Maybe in a deep cultural-technological perspective, this is no contradiction:

39. Thomas Elsaesser, "Introduction: Harun Farocki", *Senses of Cinema*, No. 21, 2002, http://www.sensesofcinema.com/contents/02/21/farocki_intro.html.

40. Honke Rambow, "Rhythmus, Zeit, Stille", in *Kunstforum International*, No. 151, July-September 2000, p. 179-184.

In many computer games, from the original *Zork* to the best-selling CD-ROM *Myst*, narrative and time itself are equated with movement through space (*i.e.*, going to new rooms or levels). In contrast to modern literature, theater, and cinema, which are built around the psychological tensions between characters, these computer games return us to the ancient forms of narrative where the plot is driven by the *spatial* movement of the main hero, traveling through distant lands.⁴¹

The co-ordinates of three-dimensional space become the medium of ac/counting—beyond writing. Is this the return to an ancient Greek, topology-based notion of narrative *diegesis*, which effectively meant routing?⁴² Augmented Reality plays with this practice, when the user in real (urban) space is being equipped with a mini-computer, a GPS receiver and audio-visual devices.

In the digital era, with its re-entry of narrative as calculation, the question arises as to whether “intermediality” is not already a perspective of the previous media age, since in digital space all sensual differences between images, sounds and texts are equally dissolved into strings of numbers. Thus it is worth remembering once more a different, non-narrative meaning of telling: “to be able to distinguish things”, “to be able to *tell one thing from the other*”—the very nature of binary calculations. This addresses the core problem of digital mediality, with its smallest units (bits) being arranged in differential sequences. The media artist Angela Bulloch extremely slows down a digitized version of Michelangelo Antonioni’s movie *Blow-Up* (1966) and at the same time extremely enlarges the single pixels, thus making the media-archaeological level of digital narrative transparent by geometrizing the traditional cinematic frame (even more radically than the video by Les LeVeque, *4 Vertigo* (2000), which sequentializes Alfred Hitchcock’s movie down to the level of one frame per second). Temporally serial data are thus being re-translated into spatial orders again—reminding us of the pre-modern cultural engineering of memory (*ars memoriae*).

Behind the celebrated *pictorial turn* we find nothing else but the calculating space from Gotthold Ephraim Lessing’s textually expressed theory of time—and space-based arts to Peter Greenaway’s experimental movie *Drowning by Numbers* (1988) and Bulloch’s media-archaeology of discrete pixels. *Theoría*

41. Lev Manovich, “Global Algorithm 1.3: The Aesthetics of Virtual Worlds. Report From Los Angeles”, *Ctheory*, 22 May 1996, http://www.ctheory.net/text_file.asp?pick=34

42. Michel de Certeau, *The Practice of Everyday Life*, trans. Steven Rendall, Berkeley, University of California Press, 1984, p. 129; originally published as: *L’invention du quotidien*. 1. *Arts de faire*, Paris, Union générale d’éditions, 1980.

wanders from the visual to the numerical. Digital media, in fact, reduce everything to numbers, with profound consequences for the nature of visual realism. “When all dimensions that affect the reality effect—detail, tone, colour, shape, movement—are quantified,” reality itself can be related to a set of numbers⁴³—a world-view well known from Pythagoras, a cultural-technological Moebius-loop between 5th century Greece (B.C.) and the present. Thus Lessing’s essay on *Laocoön*, when revisited with a media-archaeological perspective, is worth reading against its own logic; the opposition between space-based visual media and time-based literary media collapses when telling becomes counting by numbers again.

Résumés / Abstracts

La symphonie-histoire d'Alfred Schnittke.

Intermédialité, cinéma, musique

JOHANNE VILLENEUVE

► Cet article propose, dans un premier temps, une définition de l'intermédialité fondée sur les « qualités médiatiques ». Dans un deuxième temps, il prend pour exemple la *Symphonie n° 1* d'Alfred Schnittke, composée à partir d'archives cinématographiques du xx^e siècle. La complexité archéologique du travail musical de Schnittke tient à deux effets qui ne sont pas étrangers l'un à l'autre : le sens de l'intrigue qui pénètre ces compositions musicales, et la dimension archivistique qui, de la matérialité des films en tant que « documents de travail », passe dans la musicalité. Ce travail s'organise autour de deux axes narratifs : une impossible histoire de la musique en miroir d'une impossible histoire humaine ; une mise en intrigue intermédiate et souterraine dont le pôle d'attraction est l'indescriptible événementialité de la Seconde Guerre mondiale. Le croisement de la narrativité musicale et de la narrativité cinématographique y fait apparaître des « enchantements » qui tiennent aux « traces de l'oralité », soit aux qualités médiatiques du son et à la performance des corps. La narrativité historique se trouve alors critiquée et renversée par la transfiguration vivante de la technique.

► This article first proposes a definition of intermediality based upon the idea of "mediatic qualities". Secondly, it takes as an example Alfred Schnittke's *1st Symphony*, composed from film archives of the 20th century. The archaeological complexity of Schnittke's musical work rests upon two effects that are not

foreign to each other: the sense of plot that penetrates his musical compositions, and the archival dimension that, considering the materiality of films as “work documents”, passes into the musicality. This work is organised along two narrative axis: an impossible history of music which mirrors an impossible human history; an intermediatic and underground narrativization who's attractive pole is the indescribable *event* of the Second World War. The cross-cutting of musical narrativity and cinematographic narrativity produce “enchantments” that depend on “traces of orality”, *i.e.* the mediatic qualities of sound and the body's performance. Historical narrativity is hence criticized and subverted by the live transfiguration of technique.

Telling versus Counting

WOLFGANG ERNST

► Il existe une tension épistémologique entre *raconter* et *compter*, et cette tension pourrait être perçue comme reposant sur des conditions médiatiques. La thèse que défend cet article est une dé-mystification de l'ère digitale, une sorte d'amnésie média-archéologique: le numérique, qui fonde toutes les technologies digitales, a toujours été mis de l'avant comme une pratique culturelle de médiatisation de la réalité. Alors que l'acte de conter a été efficace sur le plan discursif, une autre façon d'aborder et de traiter la réalité a toujours déjà été mise en œuvre avant d'être techniquement matérialisée. *Raconter*, après tout, ne veut pas seulement dire « rendre compte oralement ou par écrit d'une série d'événements ou de faits », mais renvoie également au fait de « compter ». Plutôt que de tenter une trajectoire chronologique linéaire, la relation historique qui lie « raconter » et « compter » pourrait être décrite à partir de reconfigurations dépendant de différents médias.

► There is an epistemological tension between the cultural practices of *telling* and *counting*; this tension can be seen as a function of mediatic conditions. The thesis of the following essay is a de-mystification of the digital age, a kind of media-archaeological amnesia: the numerical, which is the basis of digital technologies, has always been performed as a cultural practice of mediating reality. While story-telling has been successful on the discursive surface, an alternative way of processing the real has always been at work before it became technically materialized. *To tell*, after all, does not only mean “to give an account in speech or writing of events or facts”, but as well “to count things”. Rather than attempt-

ing a linear chronological trajectory, the historical relation in history between telling and counting might be described as reconfigurations according to different media.

Le secret du raconteur

MARIE-PASCALE HUGLO

► À partir d'une interrogation sur le temps du récit raconté, l'article trace les contours de ce que l'on pourrait appeler la présence narrative. Loin d'être une simple question de temps verbal, la présence narrative implique une mémoire complexe que le raconteur tresse sous un mode spécifique, celui du secret. Il s'agit donc d'examiner les liens entre récit, mémoire et secret, pour ensuite proposer une lecture de *L'appareil-photo* de Jean-Philippe Toussaint. L'hypothèse suivant laquelle la mémoire à l'œuvre dans le récit de Toussaint est non seulement littéraire mais aussi cinématographique ouvre à l'idée d'une mémoire non seulement intertextuelle mais aussi intermédiaire (ce qui veut dire que les qualités propres à un médium donné peuvent se déplacer d'un milieu à un autre); quant au secret, il débouche sur un questionnement des mutations contemporaines du récit dans le milieu hypertextuel en pleine expansion.

► This paper focuses on what we could call narrative presence. Far from being only a matter of verbal tense, narrative presence involves a complex memory that the teller recollects in a specific way: that of the secret. What is at stake, therefore, is the close relationship between story, memory and secret. A reading of Jean-Philippe Toussaint's *L'appareil-photo* will enable us to explore these relationships. Indeed, *L'appareil-photo* introduces the idea that narrative memory is not only intertextual but also intermedial (which means that given "medial" qualities can migrate from one medium to another); as far as secret is concerned, it leads us to ponder over recent narrative mutations related to the expansion of hypertext.

Raconter : témoigner face au silence de la langue

ESTHER COHEN

► Cet article aborde le problème de la crise de la narration qui se produit pendant la Première et Seconde Guerres mondiales, en s'appuyant sur les œuvres de Primo Levi et Paul Celan, afin de déceler la réponse stratégique que l'on peut donner à cette crise. Leur réponse consiste en un « amenuisement de la langue » qui s'oppose à « l'abréviation du langage » propre au totalitarisme nazi.

► This article deals with the problem of the crisis of narration after the First and Second World Wars. The thesis is supported by the reading of Primo Levi's novels and Paul Celan's poetry, in order to see the strategic response they give to this crisis. Their answer consists in a "thinning down" of the language, versus the "abridgement" of the language in totalitarian nazism.

Des diables au seuil de la conscience moderne

BRUNO TRIBOUT

► Cet article tente d'éclairer un aspect de l'invention de la conscience moderne à travers l'analyse détaillée d'un fragment des *Mémoires* de Retz (1613-1679). Parce qu'elle connaît d'importantes mutations à l'époque moderne, l'expérience de soi est médiatisée par d'intéressants *dispositifs narratifs* : ici, de façon originale, Retz fait entrer les diables dans un processus de figuration de l'espace intérieur. Ainsi, « l'anecdote des capucins noirs » se présente comme le récit allégorique d'une quête initiatique, dont le terme est atteint grâce au dispositif oculaire qui « révulse » le regard et nous fait déboucher dans ce nouveau *milieu* entre le monde et soi qu'est la conscience. Prisonnière de ses propres images du monde et repliée sur elle-même, la conscience moderne n'apparaît pourtant pas comme une conscience malheureuse, car son isolement lui impose la tâche, infinie mais joyeuse, de se raconter elle-même par le truchement des images.

► Through a detailed analysis of an excerpt taken from Cardinal de Retz's *Mémoires* (1613-1679), this article attempts to illuminate an aspect of the invention of modern consciousness. As it underwent profound alteration in early modern times, the experience of the self is expressed *via* interesting *narrative*
